Subject: Microsoft Settlement.

In this litigation and all such endeavors the United States Government has become the ENEMY of the Business Community. If they were concerned about the Economy AND the health of the business community in the United States they would act like foreign governments and support and in some cases provide financial support as well instead of hampering and stifling business and research and development. Please allow Microsoft and all other businesses compete without government interference and do not allow yourselves to be manipulated by competitors constantly complaining, they are only looking for a government sponsored "Leg-Up"
